DETAILED ACTION

Priority

1. The instant application claims benefit of the filing date to the U.S. Provisional Application S/N 60/452,643, filed on 06-March-2003. Accordingly, the filing date of the Provisional Patent Application (06-March-2003) is considered the effective filing date for the examination of the instant application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Smedley et al (U.S. Patent No. 6,253,200 B1, hereinafter referred to as Smedley.)

As to claim 1, Smedley teaches a method for application development (see Abstract) comprising:

expressing database calls within an application as tokenized SQL statements (see figures 3 and 4, and see column 5, lines 24-37);

Art Unit: 2165

initially processing the tokenized SQL statements in a database independent manner as embedded SQL (see column 5, lines 38-44, where “processing tokenized SQL statements” is read on “the tokens are processed for their semantic interpretation”); and

moving to production mode by processing the tokenized SQL statements to create callable stored procedures that reside within a database management system (see column 5, line 39 through column 6, line 5, where “columns and table names are identified and validated against the column and table names stored in the SQL-Mapper Binary”, and where “moving to production mode” is read on “recursive constructs are built which represent the utilization of each semantic clause.”)
